## **APPENDIX B**

### **FUEL PROPERTIES AND CHARACTERISTICS**

(from CPIA Publication 394, "Hazards of Chemical Rockets and Propellants", by John Hopkins University, Applied Physics Laboratory, Laurel, MD, Sept. 1984)

|                                 |                                   |
|---------------------------------|-----------------------------------|
| NAME:                           | LH <sub>2</sub> - Liquid Hydrogen |
| MILITARY HAZARD CLASSIFICATION: | Group III                         |
| DOT CLASSIFICATION:             | Flammable Liquified gas           |
| QUANTITY PER VEHICLE:           | 3,400 lb (Centaur)                |
| APPLICATION:                    | Centaur                           |

#### **PROPERTIES AND CHARACTERISTICS**

|                       |   |
|-----------------------|---|
| COMPOSITION:          | 99.79% para-hydrogen and<br>0.21% ortho-hydrogen.   |
| APPEARANCE:           | High purity Liquid Hydrogen<br>is transparent and<br>colorless.   |
| STABILITY:            | Liquid Hydrogen is<br>chemically stable.<br>Physically stable only when<br>stored under suitable<br>conditions. |
| FREEZING POINT:       | -435°F  |
| BOILING POINT:        | -423°F  |
| DENSITY:              | 0.59 lb/gal. at -423°F  |
| CRITICAL PRESSURE:    | 188 PSIA  |
| CRITICAL TEMPERATURE: | -400°F  |
| ODOR:                 | None  |

#### **HAZARDS**

|                |  |
|----------------|--|
| PHYSIOLOGICAL: | Human contact with liquid<br>hydrogen or uninsulated<br>lines can result in severe<br>frost bite. Hydrogen gas<br>acts as a simple asphyxiant<br>that can be breathed in high<br>concentrations without<br>producing systematic<br>effects. However, if the<br>concentration is high enough<br>to significantly reduce the |
|----------------|--|

amount of oxygen in the air, the effects of oxygen deprivation will be produced.

EXPLOSION:

Unconfined hydrogen-air mixtures generally burn rapidly without detonation. However, in confined areas or when ignition is caused by a shock source or small explosive charge, the mixture can detonate.

An explosion hazard can exist if liquid hydrogen is contaminated with solid oxygen or solidified oxygen enriched air.

THRESHOLD LIMIT VALUE:

None

|                                 |   |
|---------------------------------|---|
| NAME:                           | LOX-Liquid Oxygen                       |
| MILITARY HAZARD CLASSIFICATION: | II                                      |
| MILITARY STORAGE COMPATIBILITY: | LIQ-A                                   |
| DOT CLASSIFICATION:             | Non-Flammable Liquid                    |
| QUANTITY PER VEHICLE:           | 146,300 lb (an additional<br>15,300 lb) |
| APPLICATION:                    | First Stage Oxidizer                    |

#### **PROPERTIES AND CHARACTERISTICS**

|                       |   |
|-----------------------|---|
| COMPOSITION:          | 99.5% oxygen  |
| APPEARANCE:           | Light blue transparent<br>liquid. Boils vigorously at<br>ambient conditions.                |
| STABILITY:            | Liquid oxygen is chemically<br>stable, is not shock<br>sensitive and will not<br>decompose. |
| FREEZING POINT:       | -361°F  |
| BOILING POINT:        | 297°F   |
| DENSITY:              | 9.53 lb/gal. at -297.4°F  |
| CRITICAL PRESSURE:    | 737 PSIA  |
| CRITICAL TEMPERATURE: | -181°F  |
| ODOR:                 | None  |

#### **HAZARDS**

|                |  |
|----------------|--|
| PHYSIOLOGICAL: | Human contact with liquid<br>oxygen or uninsulated lines<br>can result in severe frost<br>bite. Oxygen gas will not<br>cause toxic effects.<br>Gaseous oxygen from the<br>liquid is absorbed by<br>clothing and any ignition<br>source may cause flare<br>burning. |
|----------------|--|

EXPLOSION:

When mixed with liquid oxygen, all materials that burn represent explosive hazards.

THRESHOLD LIMIT VALUE:

None

|                                 |   |
|---------------------------------|---|
| NAME:                           | TEA (Triethyl aluminum) TEB<br>(Triethyl boron)                     |
| MILITARY HAZARD CLASSIFICATION: | III   |
| MILITARY STORAGE COMPATIBILITY: | LIQ-C   |
| DOT CLASSIFICATION:             | Flammable Liquid  |
| QUANTITY PER VEHICLE:           | 0.17 lb   |
| APPLICATION:                    | TEA in first stage main<br>engine<br><br>TEA/TEB in vernier engines |

### **PROPERTIES AND CHARACTERISTICS**

|                 |   |
|-----------------|---|
| COMPOSITION:    | 100% TEA in main engine<br><br>15% TEA, 85% TEB in vernier<br>engines                                       |
| APPEARANCE:     | Colorless liquid  |
| STABILITY:      | TEA reacts violently with<br>water and organic and<br>inorganic acids. TEB reacts<br>violently with oxygen. |
|                 | <u>TEA</u> <u>TEB</u>   |
| FREEZING POINT: | -52°F                      -134°F   |
| BOILING POINT:  | +381°F                      +203°F  |
| DENSITY:        | 52 lb/cu. ft    43 lb/cu. ft<br>at 70°F   |
| FLASH POINT:    | Ignites spontaneously in air<br>at room temperature.  |
| ODOR:           | Combustion products have<br>pungent ammonia-like odor.  |

### **HAZARDS**

|                |   |
|----------------|---|
| PHYSIOLOGICAL: | TEA and TEB will destroy<br>living tissue on contact.<br><br>Combustion products are<br>highly toxic. |
|----------------|---|

FLAMMABILITY:

TEA and TEB ignites  
spontaneously in air at room  
temperature.

THRESHOLD LIMIT VALUE:

Zero

|                                 |                       |
|---------------------------------|-----------------------|
| NAME:                           | Nitrogen Tetroxide    |
| MILITARY HAZARD CLASSIFICATION: | I                     |
| MILITARY STORAGE COMPATIBILITY: | LIQ-A                 |
| DOT CLASSIFICATION:             | Poison Liquid A       |
| QUANTITY PER VEHICLE:           | 6,228 lb              |
| APPLICATION:                    | Second stage oxidizer |

#### **PROPERTIES AND CHARACTERISTICS**

|                       |  |
|-----------------------|--|
| COMPOSITION:          | 99.5% $N_2O_4$   |
| APPEARANCE:           | Reddish-brown liquid with yellowish to reddish-brown fumes.  |
| STABILITY:            | $N_2O_4$ is very stable at room temperature. At +302°F it begins to dissociate into nitric oxide and oxygen, but upon cooling it reforms into $N_2O_4$ . |
| FREEZING POINT:       | +11.8°F  |
| BOILING POINT:        | +70.1°F  |
| DENSITY:              | 12.1 lb/cu. gal. at 68°F   |
| CRITICAL TEMPERATURE: | 1,469 psia   |
| CRITICAL PRESSURE:    | +316.8°F   |
| FLASH POINT:          | None   |
| ODOR:                 | Characteristic irritating, pungent and acid-like odor.   |

#### **HAZARDS**

|                |   |
|----------------|---|
| PHYSIOLOGICAL: | $N_2O_4$ liquid is corrosive and can cause severe burns of the skin and eyes unless it is immediately removed. Inhalation of $N_2O_4$ vapors is |
|----------------|---|

normally the most serious hazard.

SYMPTOMS OF POISONING:

Irritation of the eyes and throat, cough, tightness of the chest, and nausea - are slight and may not be noticed. Then hours afterward, severe symptoms begin; their onset may be sudden and precipitated by exertion. Coughing, a feeling of constriction in the chest, and difficult breathing are typical.

FLAMMABILITY:

$N_2O_4$  is a corrosive agent whose corrosiveness is enhanced in the presence of water. It is not sensitive to shock, heat, or detonation. It is not flammable in air but will support combustion.

THRESHOLD LIMIT VALUE:

3 ppm for  $NO_2$

2.5 ppm for  $N_2O_4$

At no time will personnel be subjected to any concentration greater than TLV.

|                                 |  |
|---------------------------------|--|
| NAME:                           | RP-1   |
| MILITARY HAZARD CLASSIFICATION: | I  |
| MILITARY STORAGE COMPATIBILITY: | LIQ-C  |
| DOT CLASSIFICATION:             | Flammable Liquid   |
| QUANTITY PER VEHICLE:           | 67,000 lb (an additional<br>11,000 lb.)  |
| APPLICATION:                    | RP-1 is a thermally stable<br>kerosene having a very high<br>energy content. It is used<br>for first stage fuel. |

#### **PROPERTIES AND CHARACTERISTICS**

|                 |   |
|-----------------|---|
| COMPOSITION:    | Hydrocarbon   |
| APPEARANCE:     | Clear liquid ranging in<br>color from water-white to a<br>pale yellow.  |
| STABILITY:      | A mixture of RP-1 and liquid<br>oxygen forms a gel which may<br>explode upon being subjected<br>to impact or shock. |
| FREEZING POINT: | -40°F Max.  |
| BOILING POINT:  | 350° to 525°F   |
| DENSITY:        | 49.95 to 50.82 lb/ft <sup>3</sup> at<br>60°F  |
| FLASH POINT:    | 110°F   |
| ODOR:           | Strong, kerosene-like   |

#### **HAZARDS**

|                |   |
|----------------|---|
| PHYSIOLOGICAL: | Inhaling vapors may cause<br>headache, dizziness or<br>nausea. Continuous contact<br>with the skin can cause<br>irritation. |
| EXPLOSION:     | A mixture of vapor and air<br>is dangerous and should be<br>considered as an explosive                                      |

mixture.

THRESHOLD LIMIT VALUE:

500 PPM in air.

At no time will personnel be subjected to any concentration greater than the threshold limit value (TLV).

|                                 |                   |
|---------------------------------|-------------------|
| NAME:                           | Aerozine 50       |
| MILITARY HAZARD CLASSIFICATION: | III               |
| MILITARY STORAGE COMPATIBILITY: | LIQ-C             |
| DOT CLASSIFICATION:             | Flammable Liquid  |
| QUANTITY PER VEHICLE:           | 3,892 lb          |
| APPLICATION:                    | Second-stage fuel |

#### **PROPERTIES AND CHARACTERISTICS**

|                       |  |
|-----------------------|--|
| COMPOSITION:          | Mixture of 50% UDMH and 50% hydrazine                            |
| APPEARANCE:           | Clear, colorless liquid  |
| STABILITY:            | A-50 is thermally stable and is not shock or friction sensitive. |
| FREEZING POINT:       | +18.8°F  |
| BOILING POINT:        | +158.2°F   |
| DENSITY:              | 56.1 lb/cu. ft at 77°F   |
| FLASH POINT:          | +104°F   |
| CRITICAL TEMPERATURE: | +634°F   |
| CRITICAL PRESSURE:    | 1,696 psia   |
| ODOR:                 | Ammonia gas  |

#### **HAZARDS**

|                |  |
|----------------|--|
| PHYSIOLOGICAL: | The liquid can be absorbed through the skin; the vapors can be inhaled. Exposure may cause irritation of the mucous membranes of the eyes, respiratory passages, lungs, and gastro-intestinal tract. Direct skin contact can cause severe burns. |
|----------------|--|

MMH and UDMH are convulsant agents, irritants to the respiratory tract and eyes and may irritate the skin. They are absorbed by the skin, oral and inhalation routes. Hydrazine fuels form carcinogenic nitrosamine compounds. Also, ACGIH has listed the hydrazines as "Suspected Human Carcinogens."

EXPLOSIVE:

Liquid is flammable and reacts violently with acids and oxidizing agents.

THRESHOLD LIMIT VALUE:

0.5 ppm in air.

At no time will personnel be subjected to any concentration greater than the TLV.

|                                 |                                       |
|---------------------------------|---------------------------------------|
| NAME:                           | Oronite Extreme Pressure Additive     |
| MILITARY HAZARD CLASSIFICATION: | None                                  |
| MILITARY STORAGE COMPATIBILITY: | None                                  |
| DOT CLASSIFICATION:             | Flammable Liquid                      |
| QUANTITY PER VEHICLE:           | 5.96 lb                               |
| APPLICATION:                    | First-stage booster engine lubricant. |

#### **PROPERTIES AND CHARACTERISTICS**

|                 |   |
|-----------------|---|
| COMPOSITION:    | Phosphorus, zinc, sulphur, calcium                    |
| APPEARANCE:     | Transparent, light orange oil                         |
| STABILITY:      | Stable at controlled storage temperature below +100°F |
| FREEZING POINT: | +17°F   |
| BOILING POINT:  | Not Available   |
| DENSITY:        | 67.8 lb/cu. ft at 60°F                                |
| FLASH POINT:    | +340°F  |
| ODOR:           | Foul, sulphur-like smell                              |

#### **HAZARDS**

|                        |  |
|------------------------|--|
| PHYSIOLOGICAL:         | None. Inhaling vapors is unpleasant.   |
| EXPLOSION:             | A mixture of additive and liquid oxygen forms a gel which may explode upon being subjected to impact or shock; however, such contact does not normally occur. A mixture of additive and fuel is normal in the lubrication system and is not hazardous. |
| THRESHOLD LIMIT VALUE: | None   |
